Adult Reusable CPR

the reusable resuscitation system with the Mercury Medical quality you can count on.

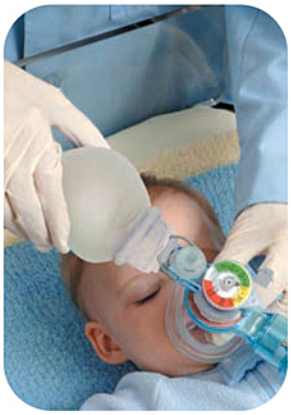
Mercury Medical's Reusable CPR Bags with Optional Color-Coded Manometer

The Reusable CPR Resuscitation System is a full line of resuscitators manufactured with Silicone and Polysulfone material providing superior lung compliance "feel" with exceptional responsiveness.

The Reusable resuscitation system is designed to be fully autoclavable, with the exception of certain accessories and replacement items such as the reservoir bag, oxgen tubing and accessories.

BENEFITS

- Optional Color-Coded Manometer, accuracy is ± 3 cm H_2O between 0 - 15 cm H_2O.
- Monitors both Airway and PEEP Pressure.
- Fast re-expansion/high breath-per-minute capability.
- Medical grade Silicone and Polysulfone material.
- Autoclavable temperature 132° C (except reservoir bag, oxygen tubing and disposable accessories).
- Optional CO_2 detector accessory.
- Patient Valve detaches to add Omni-Link tubing that provides greater reach capability. Ideal for neonatal and MRI needs.
- Optional Exhalation Filter and MR Conditional Peep Valve accessory.



Squeeze the resuscitator bag to ventilate and the manometer verifies airway pressure.

Release squeeze on exhalation and the manometer verifies PEEP pressure (when PEEP valve is attached to the resuscitator).

The Resuscitation Bag with optional Color-Coded Manometer allows for in-line monitoring of both airway and PEEP pressures.
